Education

New York University — New York, NY

Bachelor of Arts in Computer Science and Data Science — *Expected May 2028*

- Related Coursework: Data Structures, Algorithms, Computer Systems, Operating Systems, Databases, Statistics, Discrete Math, Data Science I, Data Science II (Machine Learning), Calculus I, Calculus II, Linear Algebra

Experience

Amazon — June 2026 – Aug. 2026

Software Development Engineer Intern — *Bellevue, WA*

- Reduced package correction time **12% (364s→320s)** by shipping a RAG assistant in **Python and TypeScript**.
- Cut LLM inference costs **52% per session ($9.80→$5.10)** using AWS ElastiCache for Valkey to cache FAQs.
- Decreased p90 end-to-end chat latency by **43% (7.2s→4.1s)** by migrating AWS Bedrock inference from a European partner team to internal infrastructure, cutting cross-region latency to an AWS S3 Knowledge Base.
- Integrated the team's first LLM-as-judge eval suite into CI/CD, gating response safety and quality for production.

Edit On The Spot — Feb. 2026 – Apr. 2026

Software Engineer Intern — *New York, NY*

- Designed and built fullstack web and mobile applications using **Python, TypeScript, React, and SQL**.
- Cut file save latency by **72% (9.7s→2.8s)** after replacing a legacy, high memory solution to a media transfer pipeline that intercepts network responses and streams chunked payloads to lower memory usage in **Javascript**.

Beshton Software Inc. — May 2025 – July 2025

Software Developer Intern — *Mountain View, cA*

- Automated **5+ hours per week** of manual data categorization by developing LLM-powered data organization features to categorize ambiguous user data by integrating the OpenAI API within a **Java Spring Boot** backend.

Projects

TwitchTell | *Python, Kafka, Django, PostgreSQL, React, TypeScript* — Apr. 2026 – May 2026

- Built a real-time analysis dashboard for Twitch streamers and viewers surfacing chat sentiment across live sessions, ingesting up to **∼22,000 messages per min** from 16 concurrent streaming channels.
- Optimized **Apache Kafka** producer configurations (batching/compression) and tuned consumer fetch sizes, resulting in a **70% increase in throughput (230 msg/s→370 msg/s)**.

Gymzy | *Node.js, PostgreSQL, Redis, Express.js, React, TypeScript* — Feb. 2026 – Mar. 2026

- Developed and deployed a workout planning app, reducing tedious workout organization by **∼2hrs per month**.
- Reduced client-side REST API response times by **75% (750ms→190ms)** by implementing **Redis** caching.
- Leveraged Docker containers on **AWS** using **ECS** and implemented **GitHub Actions CI/CD** pipeline, reducing deployment time by **41% (12min→7min)**.

Remote Web Camera Controller | *Node.js, Express.js, TypeScript, React, WebSockets* — Jan. 2026 – Mar. 2026

- Built a low-latency Node.js OSC bridge server over UDP and WebSockets, enabling real-time remote camera control and device feedback metrics.
- Developed an **Express** middleware layer to handle OSC messaging between a React, web frontend and iOS app.

Technical Skills

Languages: Python, C++, Java, JavaScript, C, HTML/CSS, SQL
Frameworks: Spring Boot, Django, PostgreSQL, React, NodeJS, RESTful API, NextJS, WebSockets, Kafka, Redis
Developer Tools: AWS (DynamoDB, S3, SNS, SQS, Lambda, Bedrock), Git, Docker, Jira, GitHub Actions, Postman
